Analysis Report

Transaction Intelligence & Revenue Leakage Detection | Zorvyn FinTech

Executive Summary

This report presents findings from a structured SQL and Power BI analysis of Zorvyn's transaction, merchant, settlement, and chargeback data. The analysis spans 650 merchants, 813 transactions, and ₹30.89M in GMV, uncovering ₹1.57M in revenue leakage, critical payment method health issues, and systemic merchant churn across all business categories.

Dataset Overview

Metric	Value
Total GMV	₹30,887,428.74
Total Transactions	813
Successful Transactions	692
Failed Transactions	49
Pending Transactions	29
Flagged Transactions	24
Reversed Transactions	19
Total Merchants	650
Total Chargebacks	299
Platform Fee Collected	₹6.20M
Pending Settlements	₹46.37M
Revenue Leakage	₹1.57M
Average Transaction Value	₹37,990

GMV & Transaction Volume Trends

Monthly GMV ranged from a low of ₹62,817 (January 2023) to a high of ₹690,626 (October 2023). Transaction counts per month ranged from 7 to 17, indicating relatively low but high-value transaction activity. A general GMV decline is visible from January through December

on the Executive Summary dashboard, suggesting either a narrowing merchant base or reduced transaction frequency over time.

Top Merchants by GMV

Merchant ID	Total Transactions	Total GMV (INR)	Avg Order Value
MER00258	2	₹7,01,858	₹3,50,929
MER00549	2	₹6,66,549	₹3,33,275
MER00075	2	₹5,30,840	₹2,65,420
MER00161	1	₹4,95,318	₹4,95,318
MER00072	1	₹4,60,105	₹4,60,105

The top merchants by GMV have very few transactions (1-2) but extremely high ticket sizes, indicating B2B enterprise-style payment patterns.

Payment Method Performance

Payment Method	Transactions	Total GMV	Avg Value
UPI	214	₹67,15,457	₹31,381
Credit Card	140	₹48,99,269	₹34,995
Net Banking	68	₹36,87,622	₹54,230
NACH	66	₹30,42,022	₹46,091
BNPL	59	₹29,16,996	₹49,441
Wallet	70	₹28,76,636	₹41,095
Debit Card	75	₹28,36,721	₹37,823

UPI dominates by volume at 214 transactions but carries a lower average ticket compared to Net Banking and NACH. Net Banking has the highest average transaction value at ₹54,230, indicating its use for large B2B transfers.

Transaction Failure Analysis

Failure Reason	Recoverable	Count	Failed GMV
User Abandoned	Yes	8	₹5,07,536

Failure Reason	Recoverable	Count	Failed GMV
Fraud Block	No	8	₹1,13,189
Invalid OTP	Yes	8	₹3,63,966
Network Timeout	Yes	5	₹3,14,344
Network Error	Yes	5	₹74,920
Daily Limit Exceeded	No	4	₹54,140
Bank Downtime	Yes	3	₹15,672
Bank Declined	No	3	₹42,571

User Abandoned and Invalid OTP account for 16 recoverable failures totalling ₹8.71L+ in GMV. A retry nudge or OTP resend flow could recover this revenue with no infrastructure change.

Payment Method Health Classification

Payment Method	Total Attempts	Successful	Failed	Success Rate	Health Status
Wallet	76	70	2	92.11%	Needs Attention
Debit Card	84	75	3	89.29%	Critical
Credit Card	163	140	11	85.89%	Critical
UPI	253	214	16	84.58%	Critical
Net Banking	82	68	6	82.93%	Critical
NACH	80	66	5	82.50%	Critical
BNPL	75	59	6	78.67%	Critical

Not a single payment method meets the 95% Healthy threshold. Wallet performs best at 92.11% but still falls below. BNPL at 78.67% is the most urgent, combining high ticket size with the lowest reliability on the platform.

Merchant Activity & Churn Classification

All merchants in the tracked dataset are classified as Churned with 1,000-1,200 days of inactivity. The most recently active merchants last transacted in January 2023, over 1,100 days ago. No merchant falls in the Active or At Risk bucket, which indicates either the dataset is a historical extract or the platform has a severe retention problem requiring immediate escalation.

Merchant Chargeback Exposure

CloudSuite SaaS leads with 3 chargebacks totalling ₹15,447 (Insurance, Bronze tier). ByteCart Technologies826 has the highest disputed amount at ₹2,23,375 despite only 3 chargebacks, indicating very high-value disputes. Multiple Silver and Gold tier merchants carry 2+ chargebacks, confirming that chargeback risk is not correlated with merchant tier.

Business Category Performance

Business Category	Transactions	Total GMV	Avg Transaction	Max Transaction
Logistics	39	₹23,64,682	₹60,633	₹4,60,105
Media & Entertainment	46	₹22,53,294	₹48,985	₹3,99,087
Retail	28	₹12,57,150	₹44,898	₹4,95,318
EdTech	37	₹15,11,685	₹40,856	₹3,68,753
Insurance	31	₹9,98,538	₹32,211	₹4,00,385
FMCG	33	₹9,10,795	₹27,600	₹2,71,404
E-Commerce	28	₹5,12,102	₹18,289	₹1,67,802

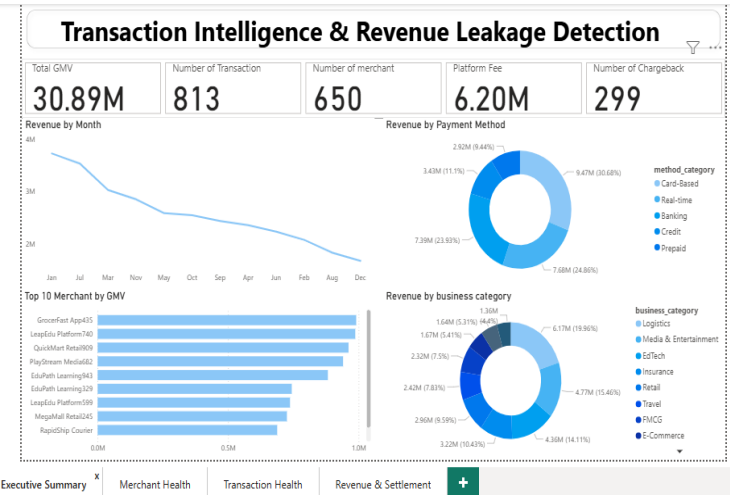
Logistics generates the highest average ticket at ₹60,633, which is 3.3x higher than E-Commerce. Despite fewer transactions, Logistics and Media & Entertainment drive disproportionate GMV share and represent the strongest segments for platform growth.

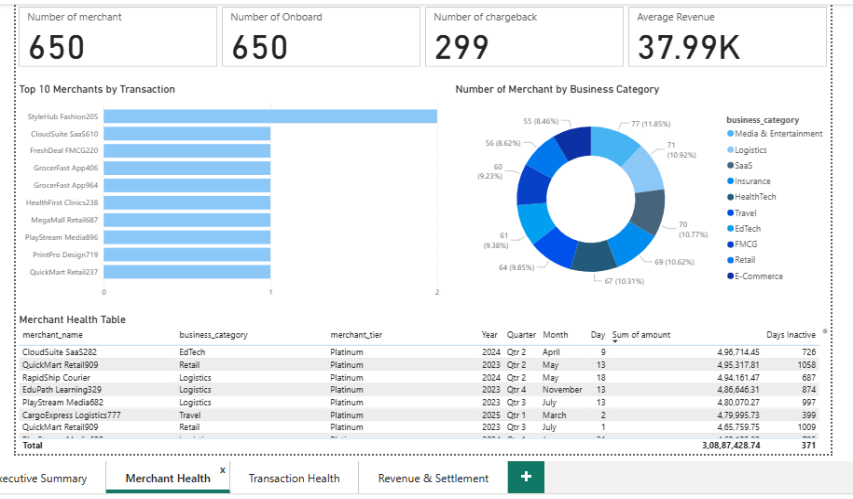
Revenue & Settlement Analysis

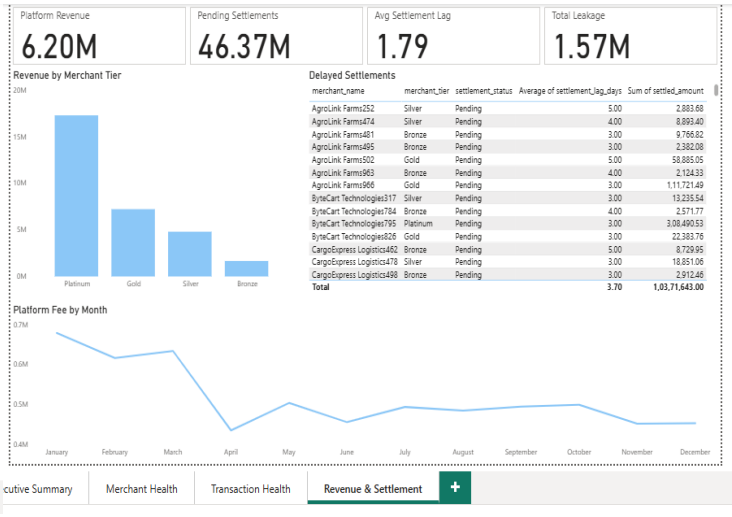
Platform Revenue collected stands at ₹6.20M against ₹46.37M in pending settlements, a 7.5x mismatch signalling a treasury risk. Average settlement lag is 1.79 days overall, with individual merchants experiencing 3-5 day delays. Total revenue leakage of ₹1.57M flows from a combination of delayed settlements, failed transactions, and unresolved chargebacks. Revenue by merchant tier confirms Platinum merchants generate the highest GMV, followed by Gold, Silver, and Bronze.

Dashboard in Power BI

Finally, we built an interactive dashboard in Power BI to present insights visually.







Key Recommendations

Launch a transaction retry flow for recoverable failures. User Abandoned and Invalid OTP failures are both recoverable and together represent ₹8.71L+ in GMV that a retry nudge could win back with minimal engineering effort.

Prioritize BNPL reliability. At 78.67% success rate with a high average ticket, BNPL failures are the most commercially damaging on the platform.

Resolve pending settlements. The ₹46.37M sitting in pending status needs SLA enforcement, especially for merchants experiencing 4-5 day lags.

Activate merchant re-engagement. The churn classification query is already built and can be scheduled weekly to flag At Risk merchants before full disengagement.

Focus acquisition on Logistics and Media & Entertainment. These two categories produce the highest GMV per transaction and offer better platform economics than volume-based E-Commerce growth.
